Automatic expense tracking from bank accounts 2. Budget-friendly investing guidelines 3. AI-powered portfolio insights 4. Learning resources for financial beginners	
5/2/2024 14:48:27	IT / Corporate	\$10,000-\$15+	Good	Mutual Funds, SP, Stocks, Insurance, Emergency F	No regularly	20-40%	Yes	Fear of losing money, Lack of knowledge, Too much	No money, Confusion	Some savings	Human advisor	2. Automatic calculation of diversification of fund in each mutual funds for safety and consistent return. (for example - your app should suggest that one should invest certain percentage of money in different categories of fund as per their age and risk) 3. App should show their future when any mutual fund is of stock from more than 5 years, so that investor can switch fund 4. Your app should suggest when is the right time to invest more capital by tracking and using RSI index, PE, which shows fear in market. Many people don't understand when to invest long-term and they end of investing on top of the market and they lose 5. Your app should track and show important changes made in those mutual funds in news section so that investors are having knowledge of what's going on in their mutual fund and can make informed decisions. (for example I used manager get changed, new stocks got added or sold etc)
